

Karè Davy

Program Manager

New York, NY | 347.822.6926 | karedavy@outlook.com | [Website](#)

EXPERIENCE

Triumph Motorcycles | New York, NY | 2025

Marketing Director (Contract)

- Built the dealership's first local marketing function across paid social, display, in-store events, and influencer partnerships, managing a 3-person cross-functional team spanning Sales, Service, and Apparel.
- Produced all campaign graphics, promotions, and content in-house using Meta Ads, Google Ads, Mailchimp, and Adobe Creative Suite.
- Relaunched a dormant newsletter (*20 subscribers, inactive since 2019*) into a monthly editorial and photo-essay platform; grew subscribers to 800 and enrolled 220 community members.
- Launched the Triumph Passport Program, a points-based loyalty initiative partnering with restaurants across the five boroughs to drive rider engagement at participating venues through the riding season.
- Developed co-marketing activations with regional coffee, apparel, event, and artist partners, positioning Triumph Brooklyn as a local cultural hub while aligning with Triumph's global brand strategy.
- Established marketing infrastructure from scratch, including a 200+ asset knowledge portal, digital templates, a product inventory database, and media storage, enabling scalable campaign replication across 8 planned editorial series.

Microsoft Software & Systems Academy (MSSA) | New York, NY | 2024 – 2025

Program Management Fellow

- Drove modeling-stack trade-off decisions, documenting rationale and locking dependencies (pandas, NumPy, scikit-learn, NLTK, Claude API) decisions held under engineering code review with minimal rework.
- Ran a 5-month product-discovery sprint, authored the PRD, set the outcome bar, and built the prioritization frameworks, delivered on schedule with no scope changes.
- Designed and shipped an end-to-end ETL pipeline integrating NLP sentiment metrics with technical indicators (MACD, SMA, EMA), returns, and volatility, with API rate-limit handling and data-integrity validation.
- Tested 6 regression models (Linear, Ridge, Lasso, SVR, Random Forest, Gradient Boosting) using cross-correlation and Granger causality. Results showed sentiment was a weak predictor, with price movements leading sentiment rather than the reverse.
- Synthesized findings into a product-strategy recommendation that reframed sentiment as a supplementary signal and identified news volume as a stronger correlate.
- Defined a 4-workstream roadmap (deployment, model enhancement, validation, expansion) and handed off the pipeline, dashboards, and documentation for continuity.

Poppin | New York, NY | 2022 – 2023

Project Manager

- Owned product strategy for an internal platform layered over NetSuite, partnering with Tech, Product, Customer Experience (CX), and Sales to ship a real-time dashboard and knowledge portals via Google Canary extensions; cut project completion time 30% and support-order expense 15%.
- Established the portals as the company's primary onboarding resource during acquisition, preserving institutional knowledge with no critical gaps through the transition.
- Designed and scaled a product-level damage-tracking system across 150+ field-installation vendors using QR-embedded SKUs and scan workflows, leading a 10-person cross-functional team; recovered \$4.7MM over 12 months by attributing 15 to 20% of unit damage to specific freight and last-mile carriers.
- Resolved a customer-segment over-service problem (sub-\$1,000 orders on the white-glove path) by shipping an automated fulfillment workflow with client auto-alerts, freeing PM capacity for high-value installations and reducing inbound Sales and CX volume.
- Optimized the physical vendor network across 150+ installers and the national office footprint, pre-positioning high-volume, high-damage SKUs at trusted regional sites; cut delivery time 10%, lowered freight cost, and enabled pre-build QA before job-site arrival.

ARX Design and Construction | New York, NY | 2020 – 2022

Project Manager

- Managed a \$20M+ residential renovation portfolio for private and real-estate-developer clients, coordinating engineers, subcontractors, and municipal agencies.
- Designed and deployed the [Adaptive Fast Support System] from scratch, modeled on the Army's Quick Reaction Force doctrine, to triage and reallocate top-skilled workers across active job sites for time-critical pushes; increased on-time milestone completion 35%.
- Built and enforced a resource-governance framework across 40+ vendors and subcontractors using Excel-based tracking; improved allocation efficiency 15% while holding safety, design-consistency, and risk controls across concurrent projects.
- Formalized a contractor onboarding and inspection SOP (milestone walkthroughs, punch lists, material-delivery QA, finish reviews) and built a reusable 40-contractor database, standardizing quality across all subsequent projects.

Innovative Energy Company Limited | Kingston, Jamaica | 2018 – 2019

Project Manager (Contract)

- Conducted a nationwide needs assessment across government agencies, farmers, and agricultural institutions to identify gaps in geospatial data, technical capacity, and land-management processes; synthesized findings into a roadmap that shaped a government-wide drone-mapping program.
- Designed and led a government-commissioned, island-wide aerial reconnaissance program spanning 83 mapping initiatives, building a geospatial data lake of runoff zones, irrigation, civil infrastructure, and land boundaries; coordinated daily with the Ministries of Agriculture, Environment, and Land.
- Built the first operational protocols for autonomous aerial systems from scratch (flight-parameter design, data-capture specs, QA review, handoff procedures) across DJI platforms and DroneDeploy.
- Launched 14 pilot programs testing LiDAR versus photogrammetry, flight patterns, and platform selection; finalized protocols adopted by internal teams, local governments, and contractor-training programs.
- Drove drone-technology adoption among a skeptical farming population and multi-tier government stakeholders through stakeholder education and change management; reached 20% nationwide adoption and established 180 partnerships across agencies, cooperatives, and technology providers.
- Delivered integrated geospatial databases and 3D terrain models combining land boundaries, crop-yield potential, runoff patterns, and weather data using MySQL, ArcGIS, and photogrammetric point-cloud processing, supporting national land-use and flood-risk decisions.

Scharetg Pictures | Washington, D.C. | 2017 – 2022

Creative Production Manager (Freelance)

- Owned end-to-end production for 30+ photography, print, and event campaigns (\$20K to \$400K budgets) for global brands including Microsoft, the U.S. Army, Navy, and Air Force, RBC, John Deere, and KPMG.
- Managed concurrent client relationships through daily approvals, change orders, contingency planning, and executive status updates.
- Built a production-operations knowledge portal from scratch in Google Workspace, centralizing client contacts, personnel rosters, financials, contracts, and timelines plus standardized brief and production-plan templates; cut delivery timelines 22%.
- Designed a centralized digital asset-management framework in Google Workspace with a company-specific naming taxonomy governing RAW footage, final deliverables, brand guidelines, usage rights, and contracts.
- Coordinated multinational production teams across countries, time zones, and languages, leading a core crew of 7 that scaled to 100+ during active productions.
- Standardized system access for production contributors using BlinkBid, Salesforce, Milanote, and Adobe Suite to run production finances, CRM, and creative workflows.

US Army | New York, NY | 2010 – 2014

Operations Manager

- Designed and launched a mentorship and retention program for 300+ junior soldiers, using qualitative interviews and demographic segmentation (age, time-in-service, geography) to build a unit-by-unit programming calendar; adopted battalion-wide and gave leadership its first analytical view of junior-soldier engagement.

- Led a 20-person team to migrate 16 years of battalion records into a structured digital library, designing the information architecture and directing execution; used for historical preservation, awards gap analysis, and change-of-command briefings.
- Owned the battalion training pipeline, moving 500 soldiers across 5 companies through combat readiness, weapons qualification, and leader-development schools over 3 years, using cohort performance data to improve outcomes cycle over cycle.
- Directed accountability and movement of \$600M+ in serialized assets (vehicles, weapons systems, communications equipment, ammunition) across the deployment lifecycle, maintaining full documentation accuracy with zero discrepancies across all property-accountability audits.
- Served as primary communications lead across four coordination streams during the Afghanistan draw-down (coalition partners, Afghan leadership, relief-in-place transfers, multinational liaison); authored 500+ family communications and published 10,000+ photos and videos through the DoD's public-affairs system.

CORE COMPETENCIES

Platforms & Tools: Azure | .NET | NetSuite | JIRA | Git

Program Governance & Strategy: Strategic Planning | Growth Roadmapping | OKRs & KPI Setting & Attainment | Budget Management | Risk & Dependency Mapping | Process Improvement

Change & Transformation: Change Management | AI Implementation | Technology Integration | Organizational Design

People & Communication: People Leadership | Training & Mentoring | Relationship Building | Executive & Multi-Stakeholder Communication Strategy | Cross-functional Leadership

Data & Analytics: Data Analysis & Reporting | ETL Pipeline Design | SQL | Python | NLP | Statistical Modeling | Tableau

EDUCATION & TRAINING

Bachelor of Fine Arts (B.F.A.), Interior Design | New York School of Interior Design

Microsoft Software and Systems Academy (MSSA) – Program Management | Microsoft |

17-week program: Azure cloud, .NET, SQL, Git; delivered 3 full-stack projects including a cloud-native inventory management prototype.
