

Karè Davy

Program Manager

New York, NY | 347.822.6926 | karedavy@outlook.com | [Website](#)

SUMMARY

Driven by curiosity throughout my career, I am a technical program and product leader with experience delivering data-driven platforms and operational systems across AI, logistics, and enterprise environments. Proven track record of leading cross-functional initiatives end-to-end, building scalable ETL pipelines and analytics frameworks, and driving measurable business impact through process optimization and technology integration. Combines strong technical fluency with disciplined project execution, stakeholder alignment, and strategic decision-making.

EXPERIENCE

Microsoft | New York, NY | 2024 – 2025

Program Manager (Product)

- **Structured and governed** a five-month product discovery sprint defining the outcome bar, authoring the PRD, and establishing prioritization frameworks **applying program governance and Agile sprint management** across a cross-functional review panel of four senior leaders (Principal PM, Principal Financial PM, Senior SWE, Azure Core Security SWE); *delivered on time with zero scope overruns.*
- **Drove technical trade-off decisions** on the modeling stack (TextBlob + VADER over fine-tuned transformer), documenting rationale and locking the full dependency stack (pandas, NumPy, scikit-learn, Alpha Vantage SDK, NLTK, Claude API) **applying systems thinking and risk analysis** to balance feasibility, scope, and timeline; *trade-off decisions held under SWE code review with minimal rework required.*
- **Designed and delivered** an end-to-end ETL pipeline integrating NLP-derived sentiment metrics with MACD, SMA, EMA, returns, and volatility signals **applying data architecture and pipeline engineering skills** with API rate-limit handling and data-integrity validation at every stage.
- **Evaluated and selected** from six regression models (Linear, Ridge, Lasso, SVR, Random Forest, Gradient Boosting) using cross-correlation and Granger causality testing **applying statistical modeling, analytical rigor, and evidence-based decision-making** to surface reverse-causality findings (price leading sentiment, minimum $p = 0.0847$ at lag 7).
- **Synthesized quantitative and qualitative findings** into a product strategy recommendation that reshaped the team's working direction reframing sentiment as a supplementary signal and surfacing news volume as a stronger correlate; *recommendation was formally presented to the senior review panel and informed downstream strategic discussions.*
- **Defined and handed off** a four-workstream forward roadmap (deployment, model enhancement, validation, expansion) with full pipeline documentation and dashboards **applying structured program closure and knowledge-transfer practices** to ensure continuity; *ETL pipeline and dashboards successfully handed off with full documentation.*

Poppin | New York, NY | 2022 – 2023

Project Manager

- **Owned and delivered** the product strategy for an internal platform layered over NetSuite partnering with Tech, Product, CX, and Sales **applying stakeholder management, cross-functional coordination, and process design** to ship a real-time dashboard and knowledge portals via Google Canary extensions; *reduced project completion time 30%, support orders 3%, and support-order expense 15%; portals served as primary onboarding resource during acquisition with no critical institutional knowledge gaps.*
- **Designed and scaled** a product-level damage tracking system using QR-embedded SKUs, rolling scan workflows to 150+ field installation vendors **applying partner integration strategy, cross-functional leadership, and data monetization thinking** across a 10-person team (Sales, Product, Planning, Ops, PM, BA, Tech); *unlocked a \$4.7MM revenue and cost-recovery stream over 12 months by attributing 15–20% of unit damage to specific freight and last-mile carriers.*
- **Identified and resolved** a customer-segment over-service problem (sub-\$1,000 orders on white-glove fulfillment path) by shipping an automated fulfillment workflow with auto-alert client communications **applying value-viability segmentation and capacity optimization thinking** to free PM resources; *reallocated PM capacity to high-value installations and reduced inbound volume to Sales and CX.*

- **Executed a physical-network optimization** across 150+ vendors and the national office footprint pre-positioning high-volume, high-damage SKUs at trusted regional installers **applying supply chain analysis and logistics data** from the damage-tracking platform; *reduced delivery time 10%, lowered freight cost, and enabled pre-build QA at installer sites before job-site arrival.*

US Army | New York, NY | 2010 – 2014

Operations Manager

- **Designed and launched** a unit-wide mentorship and retention program for 300+ junior soldiers conducting qualitative user research and quantitative demographic segmentation by age, time-in-service, and geography **applying behavioral analysis and program design** to translate insights into a company-by-company programming calendar; *framework was adopted battalion-wide, delivering leadership's first analytical view of junior-soldier engagement by demographic segment.*
- **Led a 20-person team** to migrate 16 years of battalion records (paper and partial digital, 1998–2014) into a structured digital library **designing the information architecture, socializing the target state, and directing execution**; *library was successfully delivered and used for historical preservation, awards gap analysis, and change-of-command briefings.*
- **Owned end-to-end delivery** of the battalion training pipeline moving 500 infantry soldiers across five companies through combat readiness, weapons qualification, and leader-development schools over three years **applying performance data segmented by mounted and dismounted operations** to iteratively improve cohort outcomes; *delivered 100% of soldiers through combat readiness cycles with measurable cohort-over-cohort improvement.*
- **Directed accountability and movement** of \$600M+ in serialized battalion assets (vehicles, weapons systems, communications equipment, ammunition) across the full deployment lifecycle **maintaining 100% documentation accuracy** in Army logistics and maintenance ERP systems; *sustained zero discrepancies across all property accountability audits.*
- **Served as primary communications envoy** across four high-stakes coordination streams Afghanistan draw-down with ISAF coalition partners, Afghan leadership engagement, relief-in-place transfers, and multinational liaison **applying executive communication and cross-cultural stakeholder management**; *authored 500+ family communications and published 10,000+ photos and videos through DoD DVIDS, maintaining soldier-family morale and unit cohesion through full deployment.*

ADDITIONAL EXPERIENCE

Marketing Director (Contract) – Triumph Motorcycles, New York, NY | 2025

Project Manager – ARX Design & Construction, New York, NY | 2020–2022

Creative Production Manager (Freelance) – Scharetg Pictures, Washington D.C. | 2017–2020

Project Manager (Contract) – Jamaican Agriculture Society, Kingston, Jamaica | 2018–2019

CORE COMPETENCIES

Platforms & Tools: Azure | .NET | NetSuite | ERP Systems | JIRA | Git | AI Optimization (Claude, ChatGPT, Perplexity, Gemini)

Program Governance & Strategy: Strategic Planning | Growth Roadmapping | OKRs & KPI Setting & Attainment | Budget Management | Risk & Dependency Mapping | Process Improvement

Change & Transformation: Change Management | AI Implementation | Technology Integration | Organizational Design

People & Communication: People Leadership | Training & Mentoring | Relationship Building | Executive & Multi-Stakeholder Communication Strategy | Cross-functional Leadership

Data & Analytics: Data Analysis & Reporting | ETL Pipeline Design | SQL | Python | NLP | Statistical Modeling | Tableau

EDUCATION & TRAINING

Microsoft Software and Systems Academy (MSSA) – Program Management | Microsoft | 2024–2025

17-week program: Azure cloud, .NET, SQL, Git; delivered 3 full-stack projects including a cloud-native inventory management prototype.

Bachelor of Fine Arts (B.F.A.), Interior Design | New York School of Interior Design
